OVERVIEW

Recent UNSW Computer Science graduate with hands-on experience building backend and full-stack applications using Python, TypeScript, Node.js (Express), PostgreSQL, Docker, Flutter, and React. Passionate about designing scalable backend systems, REST APIs, and collaborative software solutions.

EXPERIENCE

Smart Parking System | TechSoftX | Scrum Master & Frontend Developer | [Github](#) Jun 2025 – Aug 2025

- Coordinated sprint planning, task breakdown, and delivery across a 5-developer capstone team working with real client TechSoftX.
- Built REST APIs using FastAPI and MongoDB for a smart parking management application supporting authentication, QR-based access, parking reservations, and fee estimation.
- Collaborated with backend developers to connect frontend Flutter screens with reservation, slot, and payment data, improving app usability and end-to-end flow clarity.

Ignite Platform | PPIA UNSW Society | Backend Team Lead & Developer | [Github](#) Aug 2025 – Dec 2025

- Led backend development for a student networking platform connecting UNSW students and Indonesian alumni, coordinating technical decisions across a 6-developer backend team.
- Designed PostgreSQL/Supabase database schema, wrote SQL queries, and implemented REST APIs for authentication, profile management, directory search, and chat-related workflows.
- Delivered secure authentication and profile features while debugging API, database, and integration issues to ensure reliable system behaviour.
- Designed, implemented, and tested backend services using Node.js (Express), PostgreSQL, Docker, and REST APIs, collaborating within a six-developer Agile team.

E-library | IGNOTUM | Software Developer | PHP, Laravel, React, PostgreSQL May 2026 – Current

- Developed a Laravel-based enterprise document management platform for banking records, supporting secure upload, preview, download, categorization, and metadata management for internal users.
- Built PHP/Laravel REST APIs using Eloquent ORM, Form Request validation, Sanctum authentication, and PostgreSQL to manage documents, users, categories, permissions, and audit logs.
- Implemented role-based access control, category-level permissions, and document-level user restrictions to ensure sensitive banking records were only accessible to authorized users.
- Designed searchable metadata and document classification features, including customer name, NIK, CIF, account number, document type, division, and tags, improving document retrieval and operational efficiency.

Kitchen Hand | Malaya Nov 2024 – Jun 2025

- Worked in a high-volume team environment, supporting kitchen operations during busy service periods while maintaining reliability, communication, and attention to detail.

PROJECTS

Formation Studio | JavaScript, HTML/CSS, Canvas API | [Live Demo](#) | [Github](#)

- Built and deployed a browser-based choreography editor for planning dance formations with timeline-based animation and synced audio/video playback.
- Designed a keyframe animation system supporting hold and morph transitions between dancer positions using interpolation logic.
- Implemented drag-and-drop canvas editing, keyboard controls, undo functionality, JSON import/export, and localStorage autosave for persistent project state.
- Supported formation planning for up to 24 dancers on a configurable grid, making the tool practical for real choreography workflows

Job Fit Agent | TypeScript, Express, OpenAI API, React | [Github](#)

- Built an AI-powered job analysis tool that evaluates job descriptions against a candidate profile and returns structured recommendations, fit scores, matched skills, and risk flags.
- Implemented Express API endpoints for job analysis and cover letter generation using OpenAI's Responses API with structured JSON output.
- Developed a frontend interface for submitting job descriptions and viewing tailored application insights, improving the job search workflow.

Music Genre Classification | Python, Scikit-learn, GTZAN Dataset | [Github](#)

- Extracted audio features (tempo, tonnetz, zero-crossing rate) from 1,000 tracks in the GTZAN dataset to build a robust feature set for classification.
- Trained and evaluated multiple models including Logistic Regression, XGBoost, and Neural Networks, achieving 75%+ classification accuracy.
- Delivered a comprehensive presentation with data analysis, confusion matrices, and model comparison to communicate findings.

SKILLS & INTERESTS

- **Languages:** Python, TypeScript, Java, Rust, C, C++, SQL
- **Frontend:** React, Flutter (Dart), HTML/CSS, Tailwind CSS, JavaScript
- **Backend:** TypeScript, Node.js (Express), PHP (Laravel), FastAPI, REST APIs, Supabase
- **Databases:** PostgreSQL, SQLite, MongoDB
- **Tools & DevOps:** Docker, Git, AWS, Github, Jira
- **Networking & Security:** TCP/UDP, HTTP, Socket Programming
- **Machine Learning:** PyTorch, Scikit-learn, CNNs
- **Other:** Authentication, API Design, Database Design, Agile/Scrum, Testing

EDUCATION

University of New South Wales (UNSW) Sydney
Bachelor of Science (Computer Science)

Aug 2022 – Sep 2025
